

Java 0 to Hero

By: p_error404

Practice Questions - Day 1

Structure of Java Program

Class declaration is important for Java. Every Java program starts with a class and a main method.

```
public class Main {  
    public static void main(String[] args) {  
        // This is the starting point of execution  
    }  
}
```

First Program - Print Message

This program prints 'Hello World' on the terminal.

```
public class Greeting {  
    public static void main(String[] args) {  
        System.out.print("Hello World");  
    }  
}
```

Basic and Important Concepts

How to Take User Input

Step 1: Import Scanner Class

```
import java.util.Scanner;
```

Step 2: Create Scanner Object

```
Scanner sc = new Scanner(System.in);
```

Step 3: Take Input (Integer/String)

```
int age = sc.nextInt();  
String name = sc.next();
```

Step 4: Display Output

```
System.out.println("Output is: " + age + ", " + name);
```

Sample Practice Questions

1. Take Name and Print

Task: Take user's name as input and print: *"Hello Harshit"*

```
import java.util.Scanner;

public class Hello {

    public static void main(String[] args) {

        Scanner sn = new Scanner(System.in);

        System.out.println("Enter the name:");

        String name = sn.next();

        System.out.println("Name entered is: " + name);

    }

}
```

2. Take Age and Print

Task: Take age as input and print: *"Your age is 20"*

```
import java.util.Scanner;

public class uinp2 {

    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        System.out.println("Enter the name:");

        int age = sc.nextInt();

        System.out.println("Entered age is: " + age);

        sc.close();

    }

}
```

3. Take Two Numbers

Task: Take two integers as input and print both numbers.

Example Output:

First number is 10

Second number is 20

```
import java.util.Scanner;

public class uinp3 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter the First no.:");
        int a = sc.nextInt();
        System.out.println("Enter the Second no.:");
        int b = sc.nextInt();
        System.out.println("First no is:" + a);
        System.out.println("Second entered no is:" + b);
        sc.close();
    }
}
```

4. Take Full Name and College

Task: Take full name and college name as input and print both.

Hint: Use `nextLine()` to read full lines with spaces.

Example Output:

Name: Harshit Kumar

College: XYZ University

```
import java.util.Scanner;

public class uinp4 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter the Full name:");
        String name = sc.nextLine();
    }
}
```

```

        System.out.print("Enter the name of the University:");
        String uname = sc.nextLine();
        System.out.println("Entered name is:" + name);
        System.out.print("Entered University name is:" + uname);
        sc.close();
    }
}

```

5. Take Float Value

Task: Take height as float input (e.g., 5.8) and print: *"Height is 5.8"*

```

import java.util.Scanner;

public class uinp5 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter the height:");
        float height = sc.nextFloat();
        System.out.println("Entered height is: " + height);
        sc.close();
    }
}

```

6. Student Information

Task: Take name, roll number, and marks as input and print all details neatly.

Example Output:

Name: Rahul

Roll No: 21

Marks: 88

```

import java.util.Scanner;

public class unip6 {
    public static void main(String[] args) {

```

```

Scanner sc = new Scanner(System.in);
System.out.print("Enter the Name: ");
String name = sc.nextLine();
System.out.print("Enter the Roll no: ");
int roll = sc.nextInt();
System.out.print("Enter the Marks: ");
float marks = sc.nextFloat();
System.out.println("Name:" + name);
System.out.println("Roll no.:" + roll);
System.out.println("Marks:" + marks);
sc.close();
}
}

```

7. Take Character Input

Task: Take one character as input and print it.

Hint: Use `sc.next().charAt(0)` to extract the first character.

Example Output:

Character is A

```

import java.util.Scanner;

public class chinp1 {
    public static void main(String[] args) {
        Scanner inp = new Scanner(System.in);
        System.out.println("Enter Any word:");
        char ch = inp.next().charAt(0);
        System.out.println("First character of word is:" + ch);
        inp.close();
    }
}

```

8. Favorite Things

Task: Take favorite color and food as input and display both.

Example Output:

Your favorite color is Blue

Your favorite food is Pizza

```
import java.util.Scanner;

public class charinm {
    public static void main(String[] args) {
        Scanner ch = new Scanner(System.in);
        System.out.println("Enter your favorite Color:");
        String color = ch.next();
        System.out.println("Enter your favorite Food:");
        String food = ch.next();
        System.out.println("Your favorite Colour is:" + color);
        System.out.println("Your favorite food is:" + food);
        ch.close();
    }
}
```

9. Take Boolean Input

Task: Take a boolean value (true/false) as input and print it.

Hint: Use `sc.nextBoolean()`

Example Output:

Value is true

```
import java.util.Scanner;

public class boolinp {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        boolean x = sc.nextBoolean();
        System.out.print("Value is " + x);
    }
}
```

```
        sc.close();
    }
}
```

10. Personal Bio

Task: Take name, age, and city as input and print in sentence form.

Example Output:

My name is Harshit, I am 20 years old and I live in Vadodara.

```
import java.util.Scanner;

public class overall {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter the following details");
        System.out.println("Name:");
        String name = sc.next();
        System.out.println("Age:");
        int age = sc.nextInt();
        System.out.println("City:");
        String city = sc.next();
        System.out.println("Country:");
        String country = sc.next();
        System.out.println("""
*****
                Personal Bio
*****
""");
        System.out.println("My name is " + name + ", I am " + age + " years
old and I live in " + city + " in " + country + ".");
        sc.close();
    }
}
```

Bonus Mini Challenge

Task: Take name, age, percentage, and grade as input and print everything together.

Practice Goal

By completing these exercises, you will learn:

Concept	Description
Scanner	How to use Scanner class for user input
<code>nextInt()</code>	Reading integer input
<code>next()</code>	Reading single word string input
<code>nextLine()</code>	Reading full line with spaces
Variable Declaration	How to declare and initialize variables
<code>System.out.println()</code>	Printing output to console
String Concatenation	Combining strings using + operator
